PROFESSIONAL PROFILE

Full Stack Developer with 5+ years shipping end-to-end web platforms. On the front I work in React, Next.js and TypeScript; on the back I build the APIs in Python with Django REST Framework and FastAPI, plus the microservices those platforms lean on — with PostgreSQL and SQL Server underneath. I've owned the full cycle on production systems: data model, business logic, REST integrations, and deployment. These days I also lead the team that builds them. The part I enjoy most is automating business processes — putting NLP and machine-learning models to work so that large, messy datasets turn into something a business can actually decide on. Most of my deployments run on AWS (EKS / Kubernetes) and GCP, and that container-first background makes an Azure / AKS ramp-up short. Open to remote roles with international teams.

WORK EXPERIENCE

PROCALCULO (ESRI Partner) · Full Stack Developer · Tech Lead

2023 – Present · Bogotá, Colombia (remote-friendly)

- Built the company's geoprocessing REST API from scratch with Django REST Framework and FastAPI — a multi-tenant engine that powers several production products, each client running in its own isolated environment.
- Led Mapasco, a satellite-imagery marketplace: an Angular SSR frontend over a unified Django DRF API that abstracts 5+ imagery providers, with automated quotation and email workflows, credit-pool management, and a Salesforce CRM integration.
- Delivered a multi-role deforestation-monitoring system (REST API + web platform + ArcGIS Pro app) for environmental agencies, wiring automated analyst notifications into every stage of the process.
- Built the Public Tenders & Opportunities Observatory — an automation tool over procurement and business data that runs NLP to classify and prioritize relevant calls, generates its KPIs and charts on its own, and ships with an AI chatbot that guides users through the platform.
- Designed and launched the company's analytics platform: interactive dashboards and dynamic reports that back day-to-day strategic decisions.
- Deployed every production system on AWS (EKS, EC2, S3, CloudFront, Route 53) with Docker, Kubernetes, Nginx, SonarQube and GitFlow-based CI/CD.
- Lead a team of 4+ developers — technical planning, code reviews, agile sprints, and delivery.

DATAGIS · Full Stack Developer

2023 · Bogotá, Colombia

- Sole developer of a land-oriented Document Management System (ReactJS + Flask / Python) for cadastral and territorial-planning work — mine end to end, from architecture through to production deployment on the client's own infrastructure.

REALTIX · Full Stack Developer · Tech Lead

2022 – 2023 · Bogotá, Colombia

- Led the Commercial & Business Observatory for the Huila Chamber of Commerce — a platform that centralizes and analyzes regional economic and business data so the sector can decide on evidence rather than instinct.
- Wrote a Python webhook / middleware that reshapes field-captured data into the LADM-COL standard before it reaches the central database.
- Built an Angular cadastral-survey frontend with a field-oriented, low-friction UX.

EVOLUTION · Junior Backend Developer · GIS Analyst

2020 – 2022 · Bogotá, Colombia

- Built a backend microservice that syncs and pre-validates Survey123 field data into the central database, catching quality issues before they land.

- Proposed and shipped an optimized easement-disturbance survey workflow that cut collection errors and sped the team up.

FEATURED PROJECTS

Public Bidding & Opportunities Observatory

Python · NLP · Django · React · AI Chatbot

Identifies and filters relevant public tenders over procurement and business data. NLP classifies and prioritizes each call, KPIs and charts build themselves, and an AI chatbot walks users through the site.

Prisma — Geospatial Analysis API

Django DRF · Rasterio · AI / ML Models · Kubernetes · PostgreSQL

Multi-tenant REST API that standardizes access to optical and SAR imagery from several providers, with AI models doing automated land-cover classification behind an e-commerce-style purchasing flow.

Mapasco — Satellite Imagery Marketplace

Django DRF · Angular SSR · ArcGIS JS SDK · PostgreSQL · AWS EKS · Salesforce

Multi-tenant platform that unifies Planet Labs, Capella Space, Sentinel, OMEO and GeoInsights behind one API. Angular SSR frontend with ArcGIS Maps SDK for AOI drawing and footprint rendering; credit-pool management, role-based access, and an automated quotation lifecycle with email notifications.

ABACO — Deforestation Monitoring System

Django DRF · ArcPy · GDAL · PostGIS · ArcGIS Enterprise · AWS EKS

Production system for Colombia's environmental agencies. Processes multi-temporal imagery with NDVI change detection, orchestrates ArcGIS Enterprise geoprocessing, persists spatial outputs to PostGIS, and serves results over REST with automated notifications.

TECHNICAL SKILLS

Backend	Python — Django REST Framework · FastAPI · Flask · Node.js (Express) · Celery async tasks · REST / OpenAPI / Swagger · Microservices · Hexagonal architecture
Frontend	React · Next.js (SSR) · Angular 15+ (TypeScript) · JavaScript / TypeScript · ArcGIS Maps SDK · Leaflet · OpenLayers · Responsive, accessible UI
AI & Automation	NLP (tender classification & prioritization) · ML model integration (land-cover classification) · AI chatbot assistant · Automated reporting, KPIs & workflows
Cloud & DevOps	AWS — EKS · EC2 · S3 · Lambda · CloudFront · Route 53 · GCP · Kubernetes · Docker · Nginx · GitFlow · CI/CD · GitHub Actions · SonarQube · Snyk
Databases	PostgreSQL · PostGIS · SQL Server · MySQL · MongoDB · Data modeling & query optimization
Practices	Technical team leadership · Agile / Scrum · SDLC · SOLID · Unit & integration testing · Code review · Application logging & monitoring
Languages	Spanish (native) · English — B2, in progress

EDUCATION & CERTIFICATIONS

Geomatics Engineering — Cadastre & Geodesy

Universidad Distrital Francisco José de Caldas, Bogotá · In progress

Certifications

- Esri — ArcGIS Enterprise on Kubernetes · Multiuser Geodatabases · Enterprise Contextualization (2025)
- Esri — Experience Builder for Developers · Spatial Analytics & Geocoding, ArcGIS Pro (2024)
- University of Michigan (Coursera) — Python Basics · Functions, Files & Dictionaries (2020)
- Platzi — JavaScript · Backend Development · Git & GitHub (2021)
- Smart English — English B2 (2021)
